

Testicular Cancer Awareness 101

I am only 21, I don't have to worry about testicular cancer.

Actually, testicular cancer is most common among men between 15-35, especially if there is history of testicular cancer in your family

Thanks for the heads up. Where can I learn more about testing and screening for testicular cancer then?

No worries! GetItChecked.com and the Men's Health Library have brochures regarding screening!
